

**TABLE 5: Apparent Equilibrium Constants of Six Biochemical Reactions at Three Temperatures, pH 6, 7, and 8, and  $I = 0.25 \text{ Mol kg}^{-1}$  Calculated Using Data from Table 4**

		$K'$		
		283.15 K	298.15 K	313.15 K
Rx 27	pH 6	$0.70 \times 10^3$	$0.50 \times 10^3$	$0.37 \times 10^3$
	pH 7	$3.25 \times 10^3$	$2.52 \times 10^3$	$2.01 \times 10^3$
	pH 8	$2.92 \times 10^3$	$23.1 \times 10^3$	$18.8 \times 10^3$
Rx 28	pH 6	$8.02 \times 10^3$	$8.16 \times 10^3$	$8.33 \times 10^3$
	pH 7	$8.02 \times 10^3$	$8.16 \times 10^3$	$8.33 \times 10^3$
	pH 8	$8.02 \times 10^3$	$8.16 \times 10^3$	$8.33 \times 10^3$
Rx 29	pH 6	$5.08 \times 10^{-6}$	$1.35 \times 10^{-5}$	$3.27 \times 10^{-5}$
	pH 7	$5.08 \times 10^{-5}$	$1.35 \times 10^{-4}$	$3.27 \times 10^{-4}$
	pH 8	$5.08 \times 10^{-4}$	$1.35 \times 10^{-3}$	$3.27 \times 10^{-3}$
Rx 30	pH 6	$1.16 \times 10^6$	$0.67 \times 10^6$	$0.41 \times 10^6$
	pH 7	$3.41 \times 10^6$	$2.08 \times 10^6$	$1.33 \times 10^6$
	pH 8	$25.2 \times 10^6$	$15.9 \times 10^6$	$10.5 \times 10^6$
Rx 31	pH 6	$2.75 \times 10^3$	$2.56 \times 10^2$	$2.40 \times 10^2$
	pH 7	$1.10 \times 10^2$	$1.08 \times 10^2$	$1.07 \times 10^2$
	pH 8	$0.82 \times 10^3$	$0.83 \times 10^2$	$0.85 \times 10^2$
Rx 32	pH 6	$3.63 \times 10^{10}$	$1.36 \times 10^{11}$	$4.57 \times 10^{11}$
	pH 7	$4.20 \times 10^{13}$	$1.40 \times 10^{14}$	$4.26 \times 10^{14}$
	pH 8	$7.70 \times 10^{15}$	$2.41 \times 10^{16}$	$6.71 \times 10^{16}$
