*Percent of total molecules localized to actin patches, SPB(s), or the cell-division site (excluding medial patches). †Actin, Sad1p, Plo1p, and Mid1p were not excluded from the nucleus (40–44). We assumed equal concentrations of these proteins in the cytoplasm and nucleus. ‡The average of the two methods using *S. pombe* actin as standard as shown in fig S5. §Strain analyzed with (kan^r) or without (kan^s), the kanMX6 selectable marker. ||Triple YFP tag gave three times the signal of single YFP and less variance in the measurements.
