

**Table 1** Material and model constants for average murine ( $n = 11$ ) and human ( $n = 17$ ) platelet membranes as described in the main text. The 95% confidence intervals were less than 0.1% of the constant value and, therefore, are not listed

Constants	$c_1$ (N/m)	$c_2$ (-)	$c_3$ (N/m)
Murine platelet membrane	3.149	$1.34 \times 10^{-4}$	$-4.126 \times 10^{-4}$
Human platelet membrane	5.100	$4.97 \times 10^{-4}$	$-2.014 \times 10^{-3}$
