

Table 2 Standard atomic weights 2005.

[Scaled to $A_r(^{12}\text{C}) = 12$, where ^{12}C is a neutral atom in its nuclear and electronic ground state.]

The atomic weights of many elements are not invariant, but depend on the origin and treatment of the material. The standard values of $A_r(E)$ and the uncertainties (in parentheses, following the last significant figure to which they are attributed) apply to elements of natural terrestrial origin. The footnotes to this table elaborate the types of variation that may occur for individual elements and that may be larger than the listed uncertainties of values of $A_r(E)$. Names of elements with atomic number 112 to 118 are provisional.

Order of atomic number				
Number	Name	Symbol	Atomic weight	Footnotes
1	hydrogen	H	1.007 94(7)	g m r
2	helium	He	4.002 602(2)	g r
3	lithium	Li	[6.941(2)] [†]	g m r
4	beryllium	Be	9.012 182(3)	
5	boron	B	10.811(7)	g m r
6	carbon	C	12.0107(8)	g r
7	nitrogen	N	14.0067(2)	g r
8	oxygen	O	15.9994(3)	g r
9	fluorine	F	18.998 4032(5)	
10	neon	Ne	20.1797(6)	g m
11	sodium	Na	22.989 769 28(2)	
12	magnesium	Mg	24.3050(6)	
13	aluminium (aluminum)	Al	26.981 5386(8)	
14	silicon	Si	28.0855(3)	r
15	phosphorus	P	30.973 762(2)	
16	sulfur	S	32.065(5)	g r
17	chlorine	Cl	35.453(2)	g m r
18	argon	Ar	39.948(1)	g r
19	potassium	K	39.0983(1)	
20	calcium	Ca	40.078(4)	g

*Element has no stable nuclides. One or more well-known isotopes are given in Table 3 with the appropriate relative atomic mass and half-life. However, three such elements (Th, Pa, and U) do have a characteristic terrestrial isotopic composition, and for these an atomic weight is tabulated.

[†]Commercially available Li materials have atomic weights that range between 6.939 and 6.996; if a more accurate value is required, it must be determined for the specific material.

g Geological specimens are known in which the element has an isotopic composition outside the limits for normal material. The difference between the atomic weight of the element in such specimens and that given in the table may exceed the stated uncertainty.

m Modified isotopic compositions may be found in commercially available material because it has been subjected to an undisclosed or inadvertent isotopic fractionation. Substantial deviations in atomic weight of the element from that given in the table can occur.

r Range in isotopic composition of normal terrestrial material prevents a more precise $A_p(E)$ being given; the tabulated $A_p(E)$ value and uncertainty should be applicable to normal material.
