*Cells were treated with 1 mM α-factor pheromone for 15 min.

[†]Average of n experiments.

[‡]Concentration if protein was uniformly distributed in a cell volume of 29 fL.

[§]Abundance after 15-min pheromone treatment divided by abundance without pheromone.

[‖]Abundance measured in this study divided by the abundance measured in the study by Ghaemmaghami et al. (1).

**Measurements performed by others (2–11).
