

Table 1

Variable c-subunit ring stoichiometries currently known. Stoichiometries of other cyanobacterial c-rings have been also suggested, with the hypothesis that the number may vary according to energetic requirements [9].

Organism	Location	n (c-subunits/ ring)
<i>Saccharomyces cerevisiae</i> [40]	Mitochondria/inner membrane	10
<i>Escherichia coli</i> [41]	Cell membrane	10
<i>Ilyobacter tartaricus</i> [42]	Cell membrane	11
<i>Propionigenium modestum</i> [43]	Cell membrane	11
<i>Bacillus pseudofirmus</i> [44]	Cell membrane	13
<i>Synechococcus elongatus</i> [9]	Thylakoid membrane	13
<i>Spinacia oleracea</i> [45]	Chloroplast/thylakoid membrane	14
<i>Spirulina platensis</i> [46]	Chloroplast/thylakoid membrane	15
